Summary
Product developer with a focus on frontend and full-stack. I build web applications using Next.js, React, FastAPI, and MongoDB, with a background in UX/UI design. Seeking full-time positions in product or frontend development, as well as freelance assignments.

Skills

- **Programming Languages:** TypeScript, JavaScript, Python, SQL
- **Frontend:** React, Next.js, Vue.js, Redux, Tailwind CSS, Vite, HTML/CSS, Responsive Design, WCAG/Accessibility
- **Backend:** Node.js, Express.js, FastAPI, REST APIs, GraphQL, WebSockets, Authentication and Authorization
- **Data & Services:** MongoDB, PostgreSQL, Redis, Docker, AWS, Clerk, Git and GitHub, CI/CD (GitHub Actions)
- **Methodologies:** API Design, Automated Testing (Jest, Pytest), Test-Driven Development (TDD), Code Review, Agile Methodologies (Scrum), Product Development, UX Principles

Experience

Freelance Frontend Developer · Stockholm · March 2024 – Present

- Develop and deliver web applications and dashboards for clients.

Frontend Developer · Golden Ratio Studio · Stockholm · January 2021 – March 2022

- Developed responsive websites and mobile app interfaces in React.
- Integrated REST APIs to send and retrieve data.
- Managed application state using Context API and Redux.
- Collaborated in cross-functional teams with design and development.

UX | UI Designer and Web Designer · daKnight Productions AB · Stockholm · November 2019 – December 2020

- Conducted UX research, created product prototypes and wireframes, and performed user testing.

- Redesigned client websites to improve user interaction and conversions.

Frontend Developer and UX | UI Designer · SEPIDAN · Tehran, Iran · March 2012 – July 2014

- Developed website themes as a frontend developer.
- Conducted UX research, wireframing, prototyping, and mockups.

Selected Projects

Automated Crypto Trading Platform (SaaS) · Personal Project · Sep 2026 – Oct 2026

- Developed a full-stack platform where users connect exchange API keys, configure bots (Strategy, Grid, DCA), and have trades executed automatically with trailing stop, breakeven stop, multiple take-profit levels, and configurable position sizing.
- Backend in FastAPI and MongoDB with over 150 REST endpoints and over 1,300 automated tests.
- Unified adapter interface for BingX, Bybit, OKX, and Binance via ccxt. The system will not start if an adapter is missing a mandatory method.
- Background execution of trades, order reconciliation, repair of protective orders, and identification of hedge vs. one-way mode.
- Backtesting tool with 18 strategies, fee and slippage cost model, split into in-sample and out-of-sample periods. Strategies are evaluated against pre-defined criteria, and negative results are documented transparently.
- Client interface in React, Vite, and TypeScript with Vazirmatn font and Jalali dates, plus a separate admin panel in English.
- Authentication and billing with Clerk, subscription tiers, and a referral program. Deployed on Render, Vercel, and MongoDB Atlas.

Brandify: Web App for Logo and Brand Suggestions · Personal Project · Apr 2026 – Aug 2026

- Next.js 16 app where users enter a name, slogan, and industry to receive logo suggestions with palettes, patterns, and mockups. The generator is rule-based, not AI-driven.
- Editor for logos, preview in mockups, and download of brand kits as PNG.
- Accounts via Clerk and saved logos in MongoDB, where each user only sees their own.

Livana: Property Search Platform · Full-stack · 2024 – Present

- Search platform for over 1,300 housing listings in 7 Swedish cities.

- Started the project in 2024 and built the core myself: product idea, data model, and first working version. Later redesigned and rebuilt the interface, built collection scrapers for listings, and an admin panel using AI tools (Claude). Architecture, review, and testing were done by me.
- Admin panel for listings, users, moderation, and site settings. The duplicate check initially flagged 902 listings incorrectly; after the comparison was expanded with more fields (address, title, and price), the number dropped to 210.
- Secured listing registration: requires login and sets the owner from the server, not the client.
- Interactive map with marker clustering (Leaflet, OpenStreetMap) and public transit stops from GTFS (Trafiklab) and OSM Overpass.
- Next.js 14, React 18, TypeScript, Tailwind CSS, MongoDB Atlas with Mongoose, and authentication via Clerk.
- Built a pipeline for data collection and cleaning where over 10,000 incorrect records were fixed. Favorites, multi-step listing forms, and encrypted messaging between users.
- Live: https://livana.vercel.app

Education

JENSEN Vocational College · Higher Vocational Education Diploma, IT Project Manager · January 2021 – May 2023
Medieinstitutet · Higher Vocational Education, E-commerce Web Developer · September 2018 – May 2020
BrainStation · UX Design Bootcamp · September 2018 – February 2019
